

GOALS AND OBJECTIVES

The Transportation Council has established a set of five goals, each focused on an important aspect of the transportation system's performance (Safety, Mobility, Access, Livability, and Resilience). These goals are broad and strategic, and each is linked with a set of supporting objectives that are more tactical in nature.

When making decisions about investments in the transportation system, the impacts of candidate projects are reviewed against these organizational goals and objectives.

Livability

Make strategic investments in the transportation system to allow people of all ages and backgrounds to thrive by supporting economic development, encouraging population growth, and planning for housing in areas with transportation options.

Mobility

Ensure the transportation system is maintained, operated, and coordinated to support reliable travel throughout the region.

Safety

Eliminate fatalities and reduce serious injuries by 50% on Capital Region roadways; increase the security of the transportation system.

Access

Improve transportation choices and access to key destinations for people and goods.

Resilience

Prepare for and protect transportation infrastructure from changing conditions and natural hazards and responsibly adapt transportation infrastructure for the use of future generations.
